Title : IOT Based Smart Crop Protection System for Agriculture

Domain: IOT(Internet of Things)

Team Members: Balaji N
Keerthirajan A
Agathiyan S
Kavin R

Mentor name: V.Mohamed Keeran

Problem Statement:

Here the venture title is IoT Based Smart Crop Protection System For Agriculture. In this venture we use the arduino board to attach the cars and monitor the crop subject in a clever way. In this venture, step one is we must join the arduino board, through mistakenly we haven't any concept on that the way to join the arduino board to the structures and withinside the circuits to.the proverb says "Practice Makes a Man's perfect" that is like we're all attempted yet again to attach the structures to the arduino board and to the circuit with the assist of tutorials.
